### AQUATICA DIGITAL HOUSINGS SUFFIXES

#### IMPORTANT NOTICE

Aquatica uses suffixes to specify the most popular configurations of its housing, below is a description of the various suffix abbreviations used in this price list.

**NK** is a housing equipped with two Nikonos connectors.

**OPT** is a housing equipped with two optical connectors (included are adapters to attach two Sea & Sea or two Inon type strobes).

**HYB** is a housing equipped with one Nikonos type and one optical type connector (included are adapters to attach one Sea & Sea or two Inon type strobes).

**KM** is a housing equipped with a single Ikelite manual strobe connector.

**KT** is a housing equipped with a single TTL type strobe connector, this can only be used with the Ikelite # 4301 TTL converter.

**KTTL** is a housing for Canon camera equipped with an internal Ikelite TTL circuitry and with a single TTL type strobe connector, this configuration can only be used with Ikelite strobes

**VC**, this housing will be delivered with a SURVEYOR vacuum kit (circuitry valve and pump) installed at the factory.

# STROBE CONNECTORS

## IMPORTANT NOTICE ON COMPLIANCE

Not All strobes and camera combination will offer TTL, please check with the manufacturer of your strobes for compatibilliy\*

- (1) Can be used for TTL with housed flash or third party TTL converter (2) TTL is not available with these connectors
- (2) TTL is not available with these connectors
- (3) This bulkhead assembly is for Nikon film camera housings (required for eTTL)
- (4) This hot shoe is for the Nikon D700, D3s & D90 housing
- (5) This hotshoe is for current housing for Nikon cameras

\* A comprehensive description of all Aquatica strobe connectors is available from our website.  
[http://www.aquatica.ca/en/charts/bulkhead\\_web\\_field\\_guide.pdf](http://www.aquatica.ca/en/charts/bulkhead_web_field_guide.pdf)

Removal and installation of bulkhead connectors can compromise the existing sealing integrity of the housing, therefore it should only be attempted by trained technicians.

After replacing bulkheads connectors, it is mandatory for the safety of the equipment to perform a pressure test in a hydrostatic facility or by using a Surveyor vacuum system. Should these not be available, immerse the housing at depth for at least 30 minutes without any camera related equipment in it to validate the sealing integrity of the housing.
