

Aquatica is pleased to introduce the Aquatica 40D housing for the Canon 40D DSLR camera. This new housing has an ergonomic design and gives the user easy access to vital controls to deliver a high performance, user-friendly experience for the underwater photographer. Accessible from the right hand are the Main and quick dial controls as well as the shutter release and AF-ON control all this with out having to remove your hand from the grip.

Developed based on our tested and proven port system, the rugged yet compact Aquatica 40D is compatible with all of our bayonet ports and accessories. The 100 meters (over 300 feet) pressure certification is sure to please even the most technical of diver.

The housing is supplied with two universally accepted Nikonos-type strobe connectors, giving the user a wide array of underwater strobes to choose from and the flexibility to mix brands and models of strobes as desired. The secondary connector is ready to accept the new underwater remote control for pole camera use or for long exposure in low light situation. Two ¼"-20 holes are supplied on the top of the housing in the same axis as the lens for mounting a focusing light.

Aquatica 40D housing: Major Features
