

FOR IMMEDIATE RELEASE

AQUATICA INTRODUCES A NEW REMOTE RELEASE

Part of new line of products aimed at advanced underwater photographers

MONTREAL, CANADA – October, 2007 – AQUATICA is proud to introduce its new underwater camera release. This exciting product is part of a new line of AQUATICA underwater camera housings accessories that are designed to push the boundary of current underwater photography. This remote is compact, economical and most important does not require any modification of the Aquatica housing. It can be used with most Nikon and Canon camera having an electronic cable release socket.

Optional extension & cord

The Trigger assembly is made of anodized aluminum and is connected to the housing via a standard strobe cable that can be lengthened by adding an extension cord.

Aquatica housings are supplied with either double strobe connectors or the possibility to add a second one, this secondary connector is then used for triggering the camera, leaving the users the option to uses strobe(s) on the main connector if they so require.

Possible application includes: Pole camera operation for shark or whale photography, long exposure on tripod mounted housing for deep wreck photography as well as a host of other scientific or professional photography.

The remote control's simple and robust design means reliability in the field. The uses of an easily exchangeable cord that is a popular off the shelf item will makes its replacement economical, quick and easy if needed. The fact that Aquatica made sure no permanent modifications are required also mean a fast conversion to the standard Aquatica housing configuration.

Camera connected and ready to mount

Some of the features of the AQUATICA Remote control include:

- Comfortably sized grip with knurled pattern for secure non slip handling
- Quick response push button
- Accepts popular off the shelf cords for connecting, easily extendable to 20ft plus
- Full compatibility with many existing Aquatica Housing.
- 300fts / 90 meter depth rating at par with all our housings.
- Simple to assemble design for the traveling diver
- 1/4" -20 threaded hole for pole mounting

Available November 2007
